Phase 04 M3 (MerLin adaptation, reduced scope) — trained QCBM under partial distinguishability and loss
Boson-sampling data m=12 n=3 and m=16 n=4 · exact MerLin SLOS · 5 seeds · postselected on n detections · curves for T = 1, 0.9, 0.7 coincide after postselection (only the event rate changes)
m=12 · photon-number-resolving
m=16 · photon-number-resolving
m=12 · threshold (collision-free postselection)
m=16 · threshold (collision-free postselection)
Exact test MMD² (lower is better)
Source indistinguishability V
QCBM (median; thin: seeds)
B5 twin (native, V=0; median)
Marginal sampler (B4)
Uniform random
